

MoveHelper

Hello, we are a group of five students from Ecole Internationale des Sciences du Traitement de l'Information (EISTI), we are based in Pau (64,France) and we worked on an application, using Java language.

Everyone has already seen a person in wheelchair, but how many people actually stopped to think about how difficult their lives can be ? Imagine how hard it is, when you are in a new place, to find your way around when there is no sign showing the right path and your mobility is severely impeded.

Our innovative web application “MoveHelper” is a visual orientation helper. Creative and intuitive, the panel design allow anyone to easily find his bearings in a specific place, for example a school building.

Therefore, our goal is to sell our application to privates for their daily lives or to companies to help visitors or employees to get around their buildings.

We hope that our application will be used throughout the world to improve the way of life of people with disabilities.

Thank you for your time.
